The nccparskip package*

Alexander I. Rozhenko rozhenko@oapmg.sscc.ru

2004/12/08

\SetParskip

The package provides identical distance between all paragraphs except section markups. It redefines control list commands and suppress topskip, partopskip, and litemsep in lists. As a result, the distance between ordinary paragraphs and paragraphs prepared by lists is the same. The command $\texttt{SetParskip}\{\langle distance \rangle\}$ controls this distance. The default distance is

\SetParskip{4pt plus 1pt minus .2pt}

In this document, we use \SetParskip{6pt plus 1pt minus .4pt}.

1 The Implementation

\SetParskip Define the command and set list skips to zero length.

- 1 (*package)
- 3 \partopsep\z@
- $4 \neq 20$
- 5 \itemsep\z@

We suppose that list definitions were done in the similar way as in standard LATEX classes. Redefine list control commands:

- 6 \def\@listi{\leftmargin\leftmargini}
- 7 \let\@listI\@listi
- 8 \def\@listii{\leftmargin\leftmarginii
- 9 \labelwidth\leftmarginii \advance\labelwidth-\labelsep}
- 10 \def\@listiii{\leftmargin\leftmarginiii
- 11 \labelwidth\leftmarginiii \advance\labelwidth-\labelsep}

Redefine the $\mbox{\sc Normalsize}$, $\mbox{\sc Normalsize}$, and $\mbox{\sc Normalsize}$ commands to avoid the $\mbox{\sc Olisti}$ redefinition in them.

^{*}This file has version number v1.1, last revised 2004/12/08.

- 12 \let\NCC@normalsize\normalsize
- $13 \ \texttt{\locolemp\cole$
- $14 \left| \text{NCC@small} \right|$
- $15 \end{15} \label{let_NCC0temp_0listi_NCC0small_let_0listi_NCC0temp} \\$

Finally we set defaults:

- 18 \normalsize
- 19 \SetParskip{4pt plus 1pt minus .2pt}
- 20 (/package)
